

About Milestone

Milestone is a global IT services firm that provides automation-enabled solutions across Digital Workplace Services, Application & Engineering Services, Cloud and Infrastructure Services.

The Milestone Advantage

Industry-leading organizations rely on Milestone as a trusted partner to accelerate innovation, improve end-user experience, and deliver business outcomes with operational agility, employee productivity, and digital transformation.

We are known for delivering enterprise-scale solutions with a focus on service delivery and operational excellence that respects your privacy, confidentiality, chain of custody, and maturity.

Milestone's customer-centric approach to service excellence drives our efforts and makes us the first choice for companies in need of a partner to help deliver transformational change.

Why Clients Love us

With over 25 years in business, Milestone has built a strong reputation for delivering technology infrastructure, support, and AI-enabled solutions that drive digital transformation across the enterprise.

Contact an expert today to learn why the world's top global technology organizations make us the first choice for companies in need of a partner to help deliver transformational change.

DIGITAL PLATFORM ENGINEERING SERVICES

A comprehensive suite of services to develop and support enterprise applications.

Modernize & Accelerate Project Development at Scale

Milestone Technologies' Digital Platform Engineering services provide a future-ready solution for complex legacy tech challenges. Our agile approach helps you modernize and accelerate application development, reduce costs, and improve ROI throughout the product lifecycle.

With our investments in Data Engineering, Cloud/DevOps, AI/ML, Big Data, IoT, and Security, we can optimize your existing processes, consolidate stacks for better usability and efficiency, and help you achieve greater results by delivering the resources and roadmap to scale your development projects.

Deep Expertise for Your Platform Engineering Project

Milestone builds a comprehensive, end-to-end roadmap with state-of-the-art architecture that helps you modernize and accelerate application production that delivers greater ROI by lowering your total cost of ownership (TCO).

Our Digital Platform Engineering services include deep competencies and support for specific phases of development, with full-time partnerships, senior engineers, UI/UX designers, and dedicated project management teams.

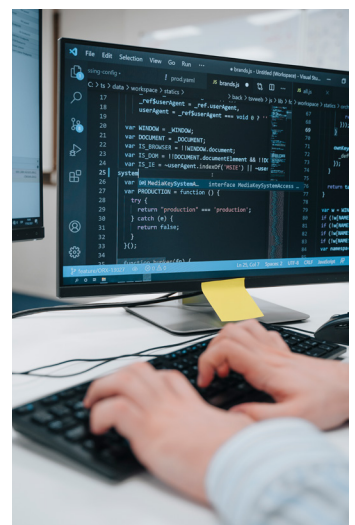

Milestone's agile and designed approach to platform engineering helps accelerate your business performance more efficiently delivering greater ROI.

Why Milestone for Digital Platform Engineering?

With Milestone's Digital Platform Engineering, we modernize your applications and address complex tech challenges, by designing:

- An end-to-end architecture build roadmap that delivers faster software development, enhanced security, and reduced operational complexity for sustainable applications.
- Future-proof design methodologies for deploying and managing enterprise-scale solutions.
- Seamless integration with multiple platforms to optimize processes in real-time.
- Cloud-native capabilities for rapid scaling and predictable releases.
- Lower total cost of ownership solutions while delivering a richer user experience.
- Secure and compliant architecture design to meet quality and IT regulatory requirements.
- Improve transparency, efficiency, and flexibility by automating critical business processes.

Client Success Stories

A leading FinTech payment service provider desired simple and secure payment solutions they could provide to businesses of all sizes worldwide.

Client Challenge

To address the complexity of the payment domain, the client needed teams to operate at the highest productivity. Training was essential to ensure that teams understood the concept of Payment processing. The client had challenges in load/performance testing due to huge volumes of payment transactions with limited access to datasets due to restricted PII and PCI information.

The Milestone Solution

Milestone provided a fully managed service from its offshore location, providing Application / Product Development services in an Agile delivery model with 45+ sprint teams. Milestone delivered a scalable technology landscape hosting 200+ microservices on the AWS cloud, catering to multiple business functionalities of over 7000+ customers across the globe.

Results

Our work has resulted in a fully automated onboarding process for merchants with auto-decisioning, which has increased their client conversion rate to 66%. We implemented a digital trail of workflow supplemented with digital signatures and provided API-based integration for large merchants and partners. This solution resulted in a 90% reduction in overall operational work.

DIGITAL PLATFORM ENGINEERING SERVICES

Solve the complex challenges of modernizing legacy applications.

Platform Engineering Services Designed for Scale

Top-Tier Development for New and Expansion Projects

Milestone provides groundbreaking design-engineering-build roadmaps and an optimized application production lifecycle with a personalized engagement and delivery model that helps achieve greater results for organizations with greenfield/expansion projects, or even those starting from scratch.

Accelerate the Speed of Application Delivery

Our end-to-end build roadmap and state-of-the-art architecture modernizes and accelerates application production, lowering cost of ownership and delivering greater ROI.

Optimize Application Delivery

Get holistic and cost-effective ways to boost existing processes and roadmaps with a full-time team to accelerate development and time-to-delivery. As your IT services partner, our experts provide deep competence and support in specific phases of development to help address gaps that impact delivery. We use a team of senior engineers, UI/UX designers, and dedicated project management that drive a cleaner and smoother roadmap.

Maximize Deep & Full Stack Capabilities Through Consolidation

Consolidate stacks that have grown haphazardly over years of organic/inorganic practices leading to workflow redundancies.

Drive Tech Refresh Effortlessly

Expand your existing code, develop new features, and use the latest trends to streamline your Digital Transformation journey. Using AI, ML and DL capabilities, we support cloud adoption and migrations from existing applications so you can stay ahead of the competition.

Move from Product to Platform to Sustainability

We design and curate platform processes that bring a more powerful combination of technology, strategy, and capabilities to transform the entire enterprise, making it more sustainable, robust, and effective in driving excellence.

More than Application Development and DevOps

Our rigorous engineering team comes with years of product engineering experience that complement the new age adoption of digital technologies that leverage best practices to deliver value across multiple industries.

Improve Product Lifecycle Management

Integrate applications, retire underperforming applications, and enable a longer lifecycle from ideation to cash. With Milestone, you can more easily drive digital continuity throughout your entire organization when integrating new apps into your environment.

Explore Milestone Today

Discover how Milestone can support and accelerate your digital transformation with project-based services and expertise for optimizing efficiency, increasing productivity, enhancing security, minimizing cost, and maximizing ROI.
